What is dbatools?

- Community driven PowerShell module
- Manage, configure and deploy SQL Server
- Command line SQL Server Management Studio
- <https://dbatools.io/>

Goal for this session...

- You probably already know PowerShell
- But does your DBA?
- Let's show them some really cool things we can do with dbatools

Use Cases

- **Building connections**
- **Getting information**
- **Performing database backups and restores**
- **Balancing data across data files**
- **Building an Availability Group in code**
- **Using the Copy-* cmdlets**
- **Using the instance configuration cmdlets**

Demo!
